PROFESSIONAL SUMMARY

Backend Engineer with **2 years of experience specializing in scalable, low-latency microservices across Java, Spring Boot, Kafka, MySQL, and Redis**.Proven track record of scaling core enterprise infrastructure to handle **300,000–500,000 daily transactions**, and automating financial workflows to cut manual auditing effort by 90% and prevent revenue leakage.Driven by high engineering standards - applying clean, **modular code design, strict transaction boundaries, asynchronous event-driven decoupling, and cache-aware data access** to build fault-isolated, high-concurrency backend systems.

TECHNICAL SKILLS

Languages: Java, SQL, Python
Frameworks & Backend: Spring Boot, Spring Data JPA, REST API design, Microservices, Modular Monolith
Messaging & Concurrency: Apache Kafka, Event-Driven Architecture, Asynchronous Processing
Data & Caching : MySQL (transactional persistence, ACID consistency), Redis (caching, low-latency reads)
Core Competencies: Distributed Systems, System Design, Fault Tolerance & Resilience, Scalability,API, Contract Design, Data Consistency

---

PROFESSIONAL EXPERIENCE

DTDC Express | Bengaluru, India
Software Engineer | September 2024 – Present

- **In-House Core Booking Platform**: Developed a modular **Spring Boot** booking engine to bring the complete platform in-house, and **boosting company margins** by eliminating third-party vendor fees.Built the platform to sustain 300K-500K bookings per day, implementing the booking domain as cohesive, **Independently evolvable modules** with clean boundaries between booking concerns.
- **Event-Driven Architecture & Pipelines**: Developed the high-throughput asynchronous REST ingestion APIs and the Kafka producers and consumers that carry each booking from intake to downstream publishing, so a slow or failing consumer never blocks a customer's booking request.
- **Transactional State & Caching**: Implemented the MySQL and Redis data layer with Spring-managed transactions, defining explicit transaction boundaries so that rate estimation, wallet validation, and order persistence commit together or roll back together.
- **Automated Cost Reconciliation Engine**: Developed the automated reconciliation pipelines that pull vendor billing records, match them against internal billing , cut the finance team's manual auditing effort by ~90% and turn a periodic manual audit into a continuous, system-driven financial control.
- **Cloud, CI/CD & Engineering Hygiene**: Integrated AWS Secrets Manager for credential handling and Amazon S3 for object storage into the booking and reconciliation services, and built the Jenkins CI/CD pipelines that build, test, and deploy them for repeatable, low-risk releases.

EDUCATION

- **Bachelor of Engineering in Computer Science** | 2024
  The National Institute Of Engineering, Mysuru,Karnataka
